## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**LISTING OF CLAIMS**

1. (Original) A method for assisting object organization comprising:

in response to a first object being subjected to an action, the first object having a controlling attribute, updating a first list of a plurality of controlling attribute-specific lists corresponding to the controlling attribute of the first object according to a sort criterion related to the action, each list of the plurality of controlling attribute-specific lists corresponding to a controlling attribute and having a plurality of entries ordered according to the sort criterion and providing alternatives as to how the action can be performed relative to objects having the controlling attribute; and,

in response to the plurality of controlling-attribute specific lists being invoked as to a second object, the second object having a controlling attribute, displaying a second list of the plurality of controlling attribute-specific lists corresponding to the controlling attribute of the second object to provide alternatives as to how the action can be performed relative to the second object.

2. (Original) The method of claim 1, further initially comprising initializing the plurality of controlling attribute-specific lists.

3. (Original) The method of claim 1, wherein each of the first object and the second object corresponds to an email.

4. (Original) The method of claim 3, wherein the controlling attribute of each of the first object and the second object corresponds to a sender of the email.

5. (Original) The method of claim 1, wherein each of the first object and the second object corresponds to a file.

10/799,456

MS149547.02

- 
6. (Original) The method of claim 4, wherein the controlling attribute of each of the first object and the second object corresponds to a creator of the file.
7. (Original) The method of claim 1, wherein the action is movement to a folder.
8. (Original) The method of claim 1, wherein the action is setting an object property.
9. (Original) The method of claim 1, wherein the sort criterion is how recent the action has been performed.
10. (Original) The method of claim 1, wherein the sort criterion is how frequent the action has been performed.
11. (Original) The method of claim 1, wherein the method is performed by execution of a computer program by a processor from a computer-readable medium.
12. (New) A method for dynamically maintaining and displaying attribute-specific lists comprising:
- initializing at least one attribute-specific list;
  - updating the at least one attribute-specific list based on an action performed on at least one attribute-specific object; and
  - displaying the at least one attribute-specific list comprising the at least one attribute-specific object.
13. (New) The method of claim 12, the at least one attribute-specific list comprising folders.
14. (New) The method of claim 12, the at least one attribute-specific list initialized to be empty.

10/799,456

MS149547.02

- 
15. (New) The method of claim 12, the at least one attribute-specific object comprising types of computer files.
16. (New) The method of claim 12, the at least one attribute-specific list initialized based on a controlling attribute.
17. (New) The method of claim 16, the controlling attribute based on at least the creator of the attribute-specific object.
18. (New) The method of claim 16, the controlling attribute based on at least the recipient of the attribute-specific object.
19. (New) The method of claim 12, further comprising sorting the attribute-specific list based on at least one sort criterion.
20. (New) The method of claim 19, the sort criterion corresponds to a level of priority.
21. (New) The method of claim 19, the sort criterion corresponds to a time at which the attribute-specific object was subject to the action.
22. (New) The method of claim 19, the sort criterion corresponds to a frequency to which the attribute-specific object is subject to the action.
23. (New) The method of claim 12, further comprising appending additional attribute-specific objects to an existing attribute-specific list.
24. (New) The method of claim 12, the action corresponds to movement of at least one attribute-specific object between attribute-specific lists.
25. (New) The method of claim 12, the at least one attribute-specific object corresponds to email.

MS149547.02

---

26. (New) The method of claim 12, the action corresponds to setting a property on at least one attribute-specific object.

27. (New) A system to facilitate dynamic object organization comprising:

an initializing component to initialize a plurality of objects subject to one or more controlling attribute;

an updating component to update the plurality of objects based on a function performed on an object subject to the one or more controlling attribute; and

a display component to display at least one of the plurality of objects.

28. (New) The system claim of 27, the plurality of objects comprises folders.

29. (New) The system claim of 27, the plurality of objects initialized to be empty.

30. (New) The system claim of 27, the object comprising types of computer files.

31. (New) The system claim of 27, the object comprising email.

32. (New) The system claim of 27, the one or more controlling attribute based on at least the creator of the object.

33. (New) The system claim of 27, the one or more controlling attribute based on at least the recipient of the object.

34. (New) The system claim of 27, further comprising a sorting component.

35. (New) The system claim of 34, the sorting component utilizing one or more sort criteria.

10/799,456

MS149547.02

36. (New) The system claim of 35, the one or more sort criteria based at least on a level of priority.

37. (New) The system claim of 35, the one or more sort criteria based at least on the time at which the object was subject to the function.

38. (New) The system claim of 35, the one or more sort criteria based at least on the frequency to which the object was subject to the function.

39. (New) The system claim of 27, further comprising an appending component to append one or more additional objects to the plurality of objects.

40. (New) The system claim of 39, the appending component utilizing the one or more controlling attribute to append the one or more additional objects to the plurality of objects.

41. (New) The system claim of 27, the function being movement of at least one object between the plurality of objects.

42. (New) The system claim of 27, the function being setting at least one property on the object.

10/799,456

MS149547.02

---

43. (New) A system to aid dynamic object organization comprising:

means for initializing one or more object-specific lists based on at least one or more controlling attribute, the one or more object-specific lists orderable based on one or more ordering criteria;

means for updating the one or more object-specific lists based on an action performed on one or more objects subject to the at least one or more controlling attribute;

means for ordering the one or more object-specific lists based on the one or more ordering criteria;

means for appending one or more objects utilizing the at least one or more controlling attribute; and

means for displaying the one or more object-specific lists.
